Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant argues that he replied to the claim objection by explaining that "paragraphs 163-165 discuss the STRUCTURES that performed the claimed functions and those structures appear on the drawing" (see Amendment filed on 10-23-2006). Examiner contends that Applicant's reply was not fully responsive because it did not answer the question the Examiner had in the claim objection: "are the means for processing, means for performing a cross-calibration, and means for recalibrating a deviating system related to the processor (126) (shown in Fig. 2)?" It appears that Applicant is claiming a plurality of structural limitations (mean plus function) where in fact there is only one structure (processor 126). If in fact there are more than one structure, then Applicant had failed to point out what/where the structures are. Paragraphs 163-165 seem to indicate that there is only one structure (i.e. processor 126) for supporting the means.
